

BETTER, SAFER PHARMA

HYPERSPECTRAL CAMERAS LET YOU
SEE BEYOND THE VISUAL INSPECTION
- THEY REVEAL THE INVISIBLE.

Get 100% control over the pharmaceutical products: perform chemical composition analysis during production process, measure the presence, amount and distribution of active pharmaceutical ingredient (API), avoid mix-ups and improve the product quality and safety.

FAST AND ACCURATE SOLUTION

Specim FX cameras:

- High frame rate – meets the industry requirements
- Accurate – they offer a high spectral resolution
- Thorough – they image everything, not just a small sample or one point
- Small – flexible installation location

Specim FX17 meets the pharmaceutical industry's needs better than any other camera on the market, offering the best performance in terms of speed and resolution. Inspect 2500 - 13000 tablets per minute - even up to 800 000 tablets per hour, and collect reliable and accurate spectral information from each and every one of them.

REAL PARTNERSHIP - EXCELLENT RESULTS

Specim can offer you a continuous, long term partnership that will help you get the most out of your imaging system.

- Timely delivery with ramp-up capacity
- Reactive support
- Continuous improvement in the use of the technology
